

Four Steps to Updating your AVG License

Step 1 Right-click the AVG icon -  - in the tray near the time / clock. Choose the first menu item that pops up – **Open AVG User Interface**

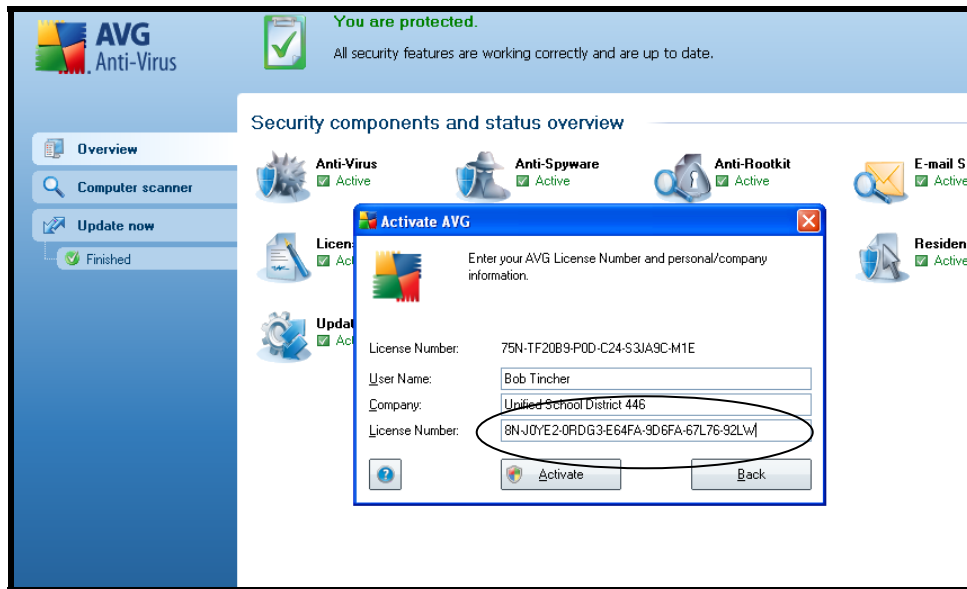

Step 2 Choose **REACTIVATE** from the Help Menu. The **ACTIVATE AVG** window should open.

Step 3 Delete / clear the license number currently in the **LICENSE NUMBER** box. Now copy the NEW license number from the eMail and paste it in the **box** to the right of **LICENSE NUMBER** as shown in the circle below. Once the new license number is in place, click on the **ACTIVATE** button.

Note: You can highlight the new license number in the eMail, then right-click it and choose “copy”. Then, return to the “Activate AVG” window, right-click the License Number BOX and choose “paste”.

Step 4 After clicking on the **ACTIVATE** button, the program will go through a brief shutdown of services, then refresh the AVG User Interface screen. The AVG User Interface screen should now display the new **LICENSE EXPIRES** date of 9/27/2012 in the lower-left corner under **STATISTICS** (see below). You may receive an indication that your system is not protected at the end of this process. Please close all programs and **RESTART** your computer at this point. All error messages should now be cleared.

Note: The other **STATISTICS** information may differ from that displayed below. Your “AVG version” and “Virus DB” version numbers should be the same number or **higher**.
